# 1000 genomes: cataloguing “all” genetic variation

## IGSR and the 1000 Genomes Project

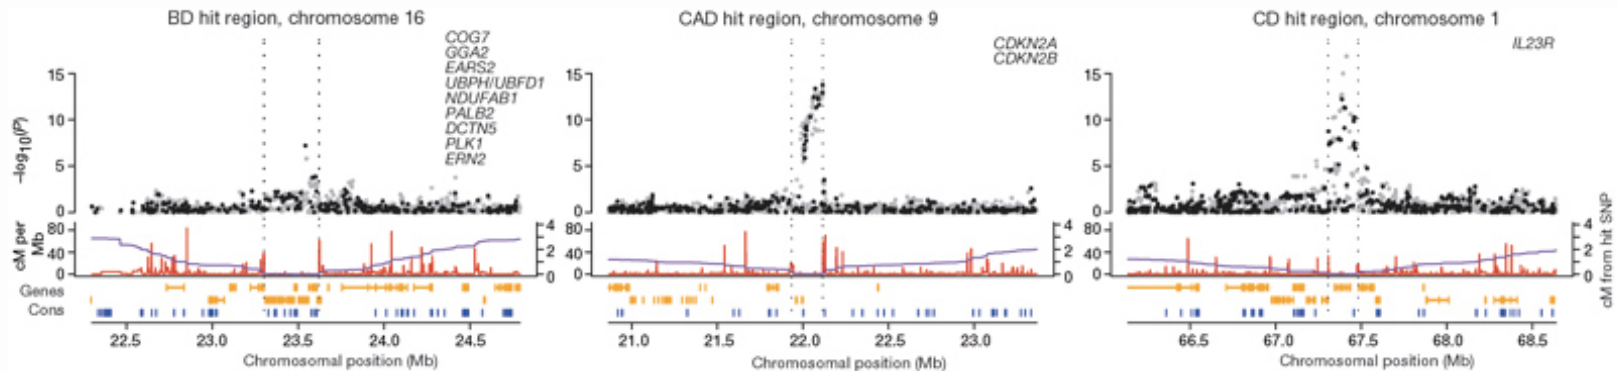

Populations: ● - African; ● - American; ● - East Asian; ● - European; ● - South Asian;

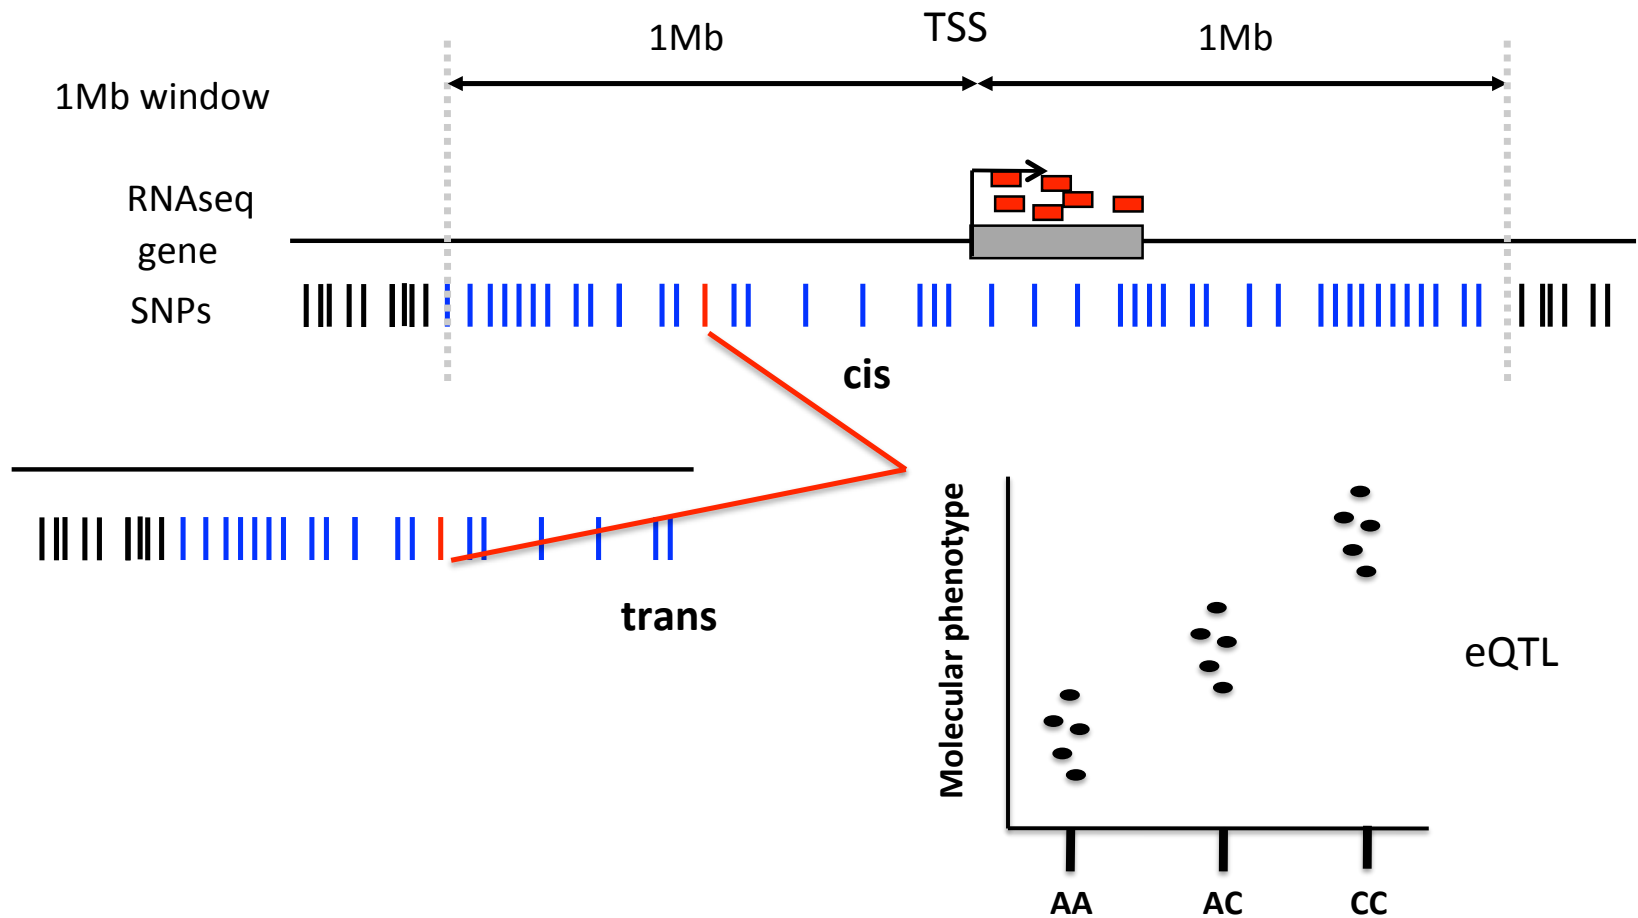

The International Genome Sample Resource (IGSR) was established to ensure the ongoing usability of data generated by the 1000 Genomes Project and to extend the data set. More information is available [about the IGSR](#).

# Genome-Wide association studies (GWAS)

# Gene expression as a key molecular phenotype – expression QTL (eQTL) analysis

# Functional variation to organismal phenotype

**GENETIC ASSOCIATION IS A CAUSAL LINK**

whole-organism phenotype

Interpretation of GWAS using molecular QTLs

eQTLs

Mechanistic insights to Genetic variation

# Background Rationale

Genome-wide association studies (**GWAS**) have identified **hundreds of common DNA variants** associated with multiple **complex diseases and traits**.

**~90% of GWAS SNPs lie in noncoding regions** (e.g. intergenic, introns).

# Many studies show trait-associated SNPs enriched for eQTLs

OPEN ACCESS Freely available online

PLoS GENETICS

## Trait-Associated SNPs Are More Likely to Be eQTLs: Annotation to Enhance Discovery from GWAS

## Coanalysis of GWAS with eQTLs reveals disease-tissue associations

Hyunseok Peter Kang, M.D.<sup>1</sup>, Alex A. Morgan, Ph.D.<sup>1</sup>, Rong Chen, Ph.D.<sup>1</sup>,  
Eric E. Schadt, Ph.D.<sup>2</sup>, Atul J. Butte, M.D., Ph.D.<sup>1</sup>

<sup>1</sup>Division of Systems Medicine, Department of Pediatrics,  
Stanford University School of Medicine, Stanford, CA

<sup>2</sup>Department of Genetics and Genome Sciences, Mount Sinai School of Medicine,  
New York, NY

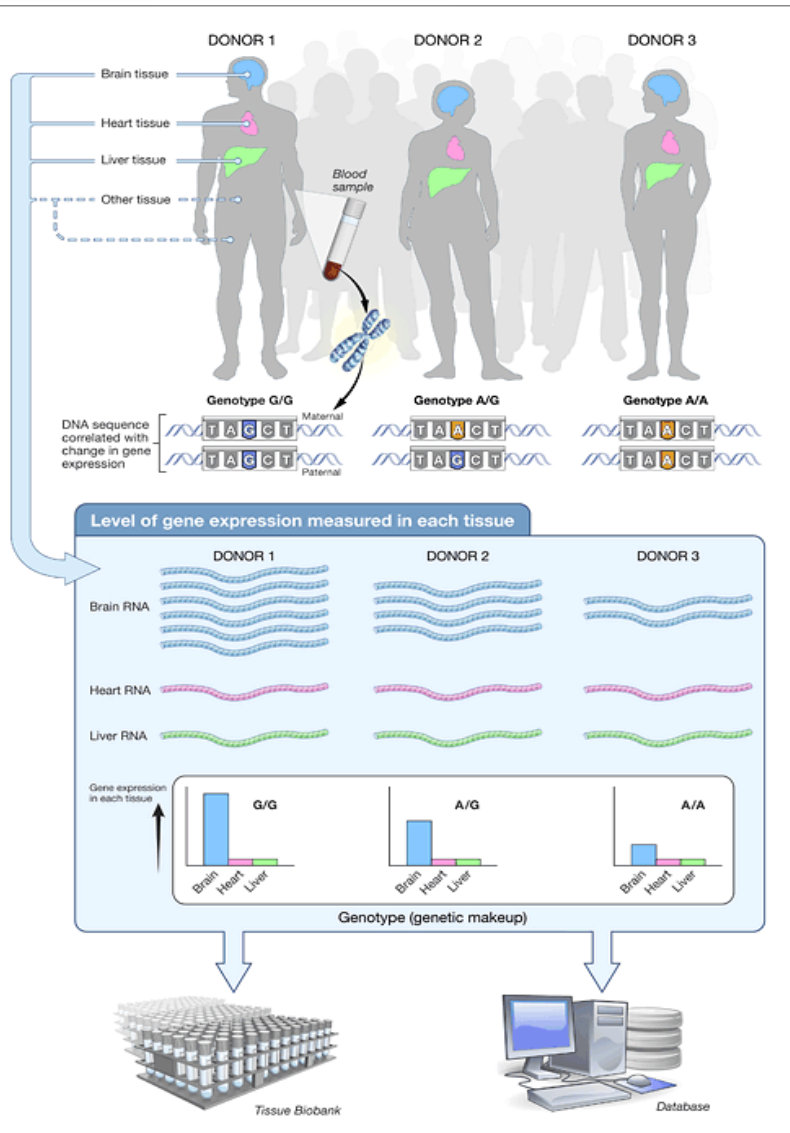

Peripheral blood  
monocyte, liver and  
adipose eQTLs

# Challenges in using eQTLs to interpret disease associations

- Measuring eQTLs in disease-relevant tissues or cell types
- Most human tissue types are hard to obtain
- Large sample sizes are required for statistical power

# Causal tissue inference

## GTEx GOALS:

- Atlas (database) of gene expression, regulation, and eQTLs from a wide range of non-diseased human tissues
- Biobank of tissues, DNA, RNA

## ULTIMATE STUDY SIZE (by 1/2016):

- 900 Postmortem Donors
- Whole exome sequencing
- Whole genome sequencing
- RNA-Seq of ~30 tissues/donor (>20,000 tissues)

## PILOT PHASE (in 2010):

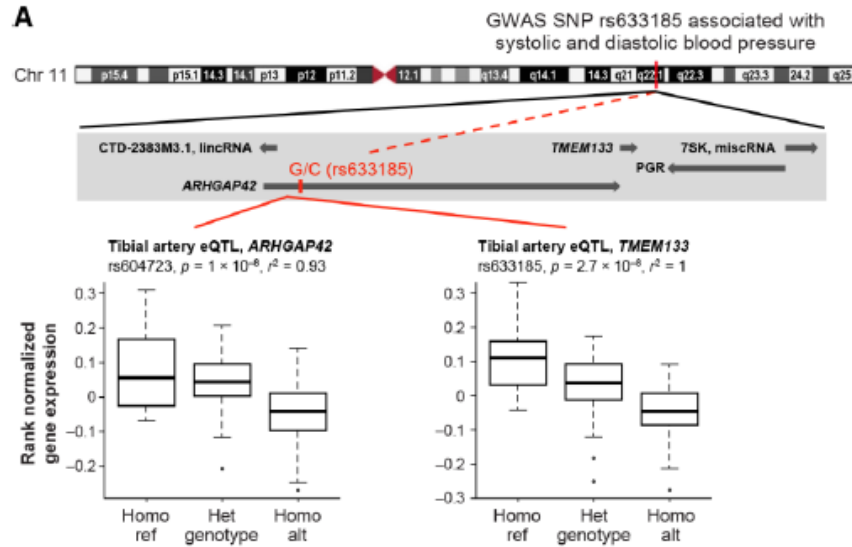

- 175 Postmortem Donors
- 1641 RNA-Seq of ~28 tissues/donor

# GTEX eQTL discovery

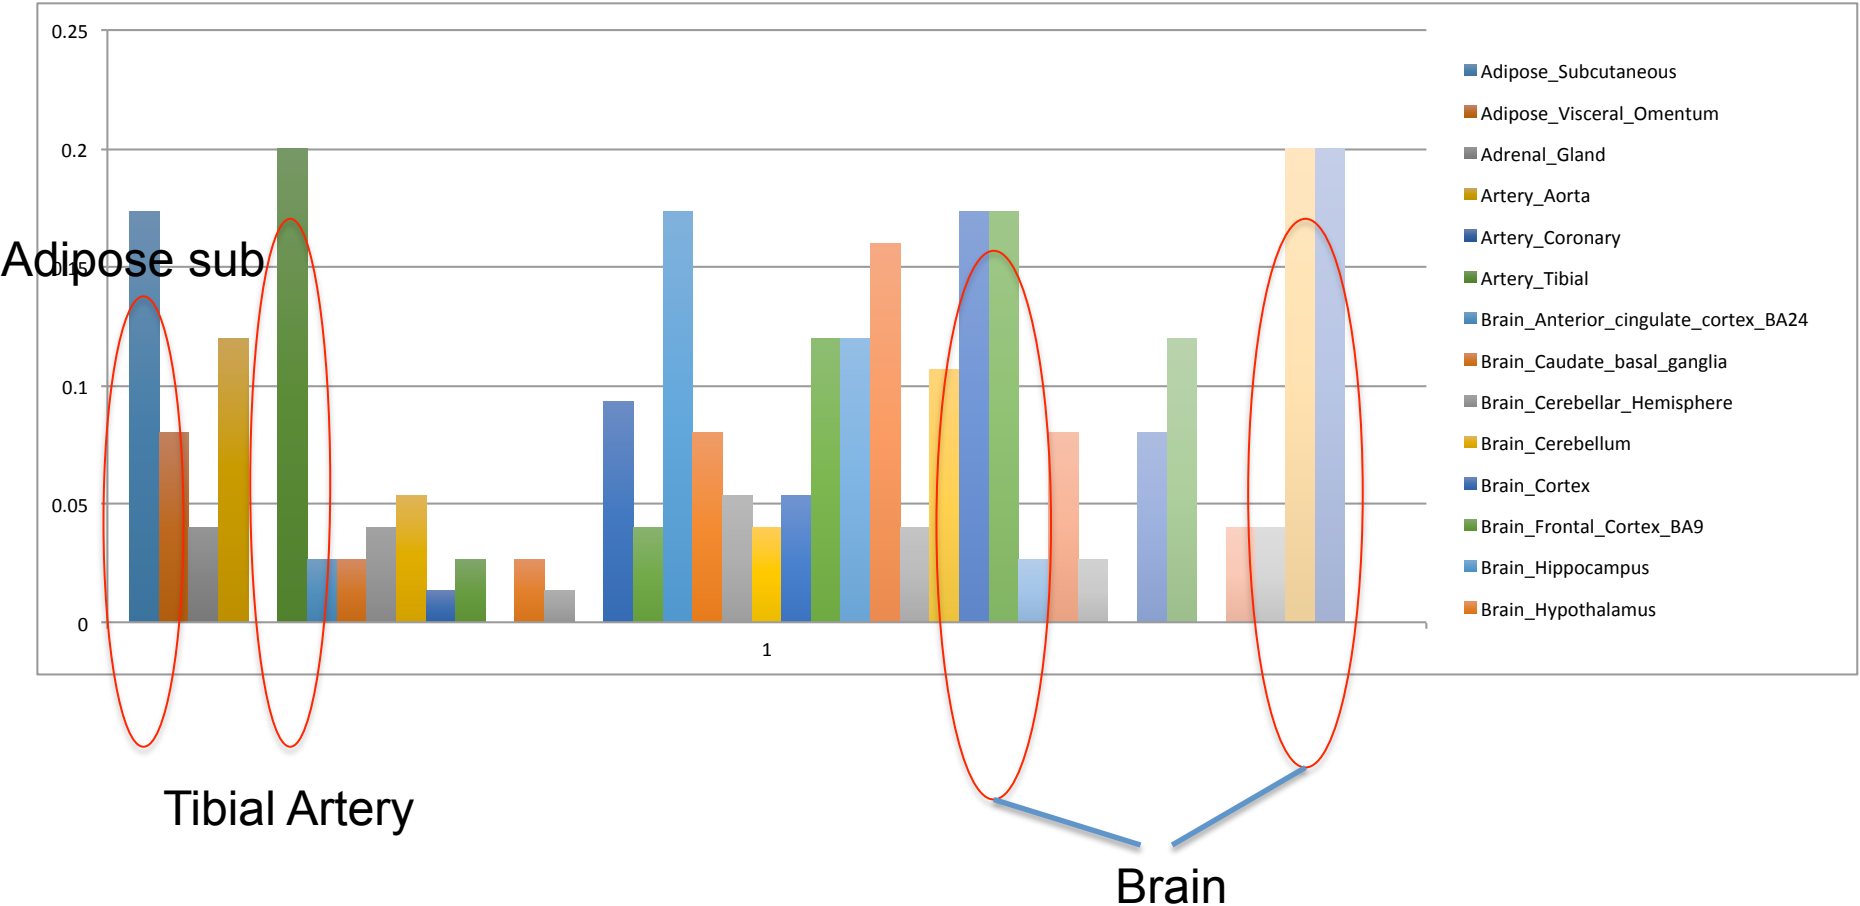

# Link eQTLs to GWAS

# Tissue activity of GWAS in multiple tissues
